- **for delegation follow the steps in below article to**

   enable **ACLable**SyncedObjectEnabled   **>> for Org AND recipients <<**

Configure Exchange to support delegated mailbox permissions in a hybrid deployment | Microsoft Docs

- **after prepare Calendar permissions (*MailboxFolderPermission*) AND SendOnBehalf**

https://docs.microsoft.com/en-us/microsoftteams/troubleshoot/known-issues/teams-exchange-interaction-issue

- **Last link in very detail**

Calendar *(MailboxFolderPermission)*

$Mailbox = **"Mailbox @ here"**   **# modify**
$Calendar = **"Calendar"**   # else ***Kalender,* Calendrier** etc
$Delegate = **"Delegated @ USER here"**   **# modify**

Get-MailboxFolderPermission -Identity "$Delegate:\$Calendar" | Format-List
Set-MailboxFolderPermission -Identity "$Delegate:\$Calendar" -User $Delegate -AccessRights Editor

SendOnBehalf Delegate permissions

CROSS premises (onprem /cloud) might still not work as ABOVE calendar permissions might not sync possibly if [**publicdelegates**] is activated in [**AAD connect sync extensions**] (**"delegate writeback" ?**

- **onprem > onprem + Cloud > cloud**

```
$Mailbox = "Mailbox @ here"            # modify
$Delegate = "Delegated @ USER here"    # modify
Get-Mailbox -Identity $Mailbox | Format-List *grant*
Set-Mailbox -Identity $Mailbox -Grantsendonbehalfto @{add="$Delegate"}
```

IF [**publicdelegates**] is activated in [**AAD connect sync extensions**] (**"delegate writeback"**
OR
set remotemailbox onprem **AND** set-mailbox in cloud
(but theoretically without [publicdelegates] activated calendar folder would still not be synced)

- IF *[publicdelegate]* is activated you will most likely get an Error that the
  double permission (Cloud AND Onprem) is not accepted anymore and synced instead

- **cloud > onprem - not confirmed**
  [**publicdelegates**] activated in [**AAD connect >> sync extensions**] theoretically should sync
  then one of the 2 below will give Error "synced / not above to change from [this side]"

  ONPREM

```
$Mailbox = "Mailbox @ here"            # modify
$Delegate = "Delegated @ USER here"    # modify
Get-RemoteMailbox -Identity $Mailbox | Format-List *grant*
Set-RemoteMailbox -Identity $Mailbox -Grantsendonbehalfto @{add="$Delegate"}
```

- **CLOUD**

```
$Mailbox = "Mailbox @ here"            # modify
$Delegate = "Delegated @ USER here"    # modify
Get-Mailbox -Identity $Mailbox | Format-List *grant*
Set-Mailbox -Identity $Mailbox -Grantsendonbehalfto @{add="$Delegate"}
```

- **onprem > cloud - not confirmed**

Possibly ? IF [**publicdelegates**] activated in [**AAD connect >> sync extensions**] theoretically should sync
ONPREM
```
$Mailbox = "Mailbox @ here"            # modify
$Delegate = "Delegated @ USER here"    # modify
Get-Mailbox -Identity $Mailbox | Format-List *grant*
Set-Mailbox -Identity $Mailbox -Grantsendonbehalfto @{add="$Delegate"}
```

AAD connect

- **optional features > Attribute Filtering**
- **enable [Publicdelegates]**
